

Medisys LMS and CRM

Designed for ease of use, by different stakeholders

One Platform for Teaching, Learning, and Institutional Governance

- Medisys delivers a unified digital education ecosystem that combines a Medisys Learning Management System (LMS) with an integrated Customer Relationship Management (CRM) layer. The platform is designed to support institutions, faculty, and students through structured digital learning, seamless access control, and governance-ready reporting-across online and offline deployments.

Medisys LMS Dashboard: Designed for Academic Delivery

- The Medisys LMS provides a centralized environment for course delivery, learning, and assessment.
- Faculty can manage students using role-based access, batch-wise grouping, and bulk enrollment. Courses are structured by program, subject, and topic, ensuring **consistent syllabus delivery across academic years**.
- Students benefit from a clean, organized learning experience with access only to relevant courses and materials, supporting clarity, continuity, and focused learning.
- The platform supports rich digital content, including text, images, videos, audio, PDFs, and interactive materials. Content can be accessed on mobile phones, tablets, and desktop devices, allowing students to learn flexibly at their own pace, anytime and anywhere.
- **Faculty members** with appropriate access rights **can also upload**, manage, and update academic content directly through the LMS, ensuring the timely availability of learning materials and greater academic autonomy.

Assessment, Tracking, and Academic Insight

- The LMS enables online tests, quizzes, assignments, and centralized question banks. Progress dashboards and downloadable reports provide real-time visibility into learning outcomes.
- Using performance analytics, faculty can **identify slow learners** at an early stage, create separate remedial batches, and conduct focused **remedial** classes to address specific learning gaps. This enables personalized academic support without affecting the regular teaching schedule.
- Students benefit from continuous self assessment, timely feedback, targeted academic support, and improved confidence through guided remediation.

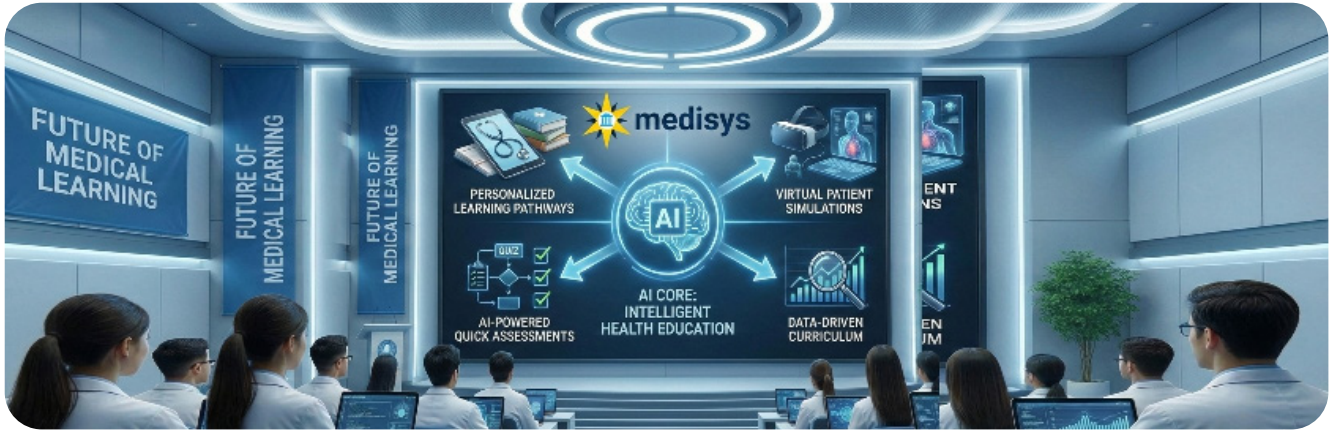

Integrated CRM: Simplifying Operations and Governance

- The Medisys CRM manages institution onboarding, course allocation, user provisioning, licensing, renewals, and deployment tracking. Automated synchronization between the CRM and LMS ensures accurate access control, correct usage tracking, and seamless continuity for all users.
- Integrated reporting enables institutions to **support audits, inspections, and management reviews** through exportable, institution-level analytics.

AI-Enabled Learning Features

- The **platform uses AI** to strengthen health education by converting expert content into clear, competency-aligned learning that supports clinical understanding and decision-making. It enables concise explanations, multimodal access (text, read-aloud, audio, multilingual), AI-assisted assessments with instant feedback, and a **course-restricted chatbot** for academic support. AI summaries further aid revision, remedial learning, and exam preparation, ensuring effective, learner-centric education within the LMS.

Key Benefits

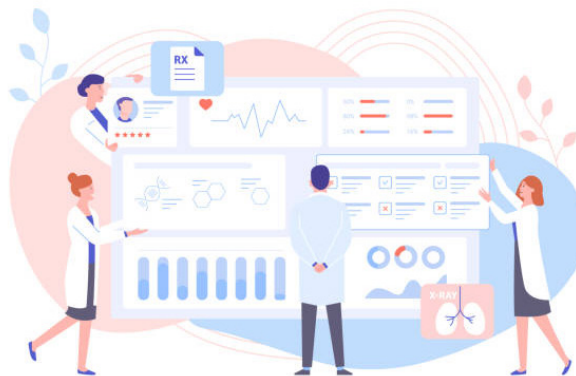

- The Medisys CRM manages institution onboarding, course allocation, user provisioning, licensing, renewals, and deployment tracking. Automated synchronization between the CRM and LMS ensures accurate access control, correct usage tracking, and seamless continuity for all users.
- Integrated reporting enables institutions to support audits, inspections, and management reviews through exportable, institution-level analytics.

For Faculty

Reduced administrative workload
 Standardized teaching delivery
 Early identification of slow learners
 Ability to form remedial batches and conduct focused classes
 Faster assessments and performance tracking
 Reliable access in online and offline environments

For Students

Structured, easy-to-navigate learning
 Anytime, anywhere access to content
 Continuous assessment and feedback
 Personalized academic support when required
 Improved confidence and academic outcomes

The Medisys Advantage

- A single, integrated LMS and CRM platform that delivers structured learning, seamless access, and institutional control-empowering faculty to teach effectively and students to learn with confidence and continuity.
